

# ATLAS II

## GAMING CABINET

Designed as a simple, yet versatile cabinet, the Atlas II is perfect for gaming companies seeking an affordable option. With a 42" monitor and practical standard features, the Atlas II can be configured to support most CPUs and technology platforms. The Atlas II is a cost-effective alternative to other cabinets, while maintaining GT Source's reputation for high quality.

Since the introduction of the original Atlas cabinet, the Atlas family of cabinets have set a benchmark for the gaming industry by providing world class design matched with incredible affordability. GTSource continues to be the leader in this category with the release of the next generation gaming cabinet, the Atlas-II. The Atlas-II brings several features with its release including the industry's first use of a High-Def 42" LCD display as well as a removable player tracking area for easier installation and configurability. The Atlas-II also provides several button deck mold sizes that can incorporate several button configurations from standard button type to OLED to complete touch LCD button decks across several manufacturers. The newer design also uses several enhancements for the players including optional plastic molds in key areas, several side and topper options as well as multiple choices for sound, light and appearance packages.
